126		K9GJN	Greg		WI	N			
127		KC3HPH	Richard			Q	FT2DR - Volume control between VFO's. When a signal is received, the audio amp turns on, which causes one to hear more noise - need to hold speaker close to ear. Say you're listening to 'A' and 'B' is set to a non-zero volume. Even if 'A' is set to zero volume, you'll still hear the person on 'A' talking - once again hold radio to ear. If volume on 'B' is set to zero, then someone transmitting on 'A' won't be heard when 'A's volume is set to zero.		
128		KK3J	Jim			Q	FTM400 into open spot - How is audio Connect/Connect/Conect is that a problem? It happens when a DV4mini is used to bridge to WIRES-X. The DV4mini is transmitting on the node/repeater input frequency. When it connects to a non-WIRES-X network it says "Connect" and "FCS/INFO" appears as the callsign.
